PROFILE

Graduate of IIIT Bhubaneswar in Electronics & Telecommunication. Full-stack developer specializing in the MERN ecosystem and Next.js, with expertise in building scalable HR tech, digital shelf analytics, and financial dashboards. Proficient in leveraging advanced algorithms and cloud functions (Azure) to deliver high-performance, data-driven applications.

EDUCATION

International Institute of Information Technology, Bhubaneswar <i>B.Tech in Electronics & Telecommunication Engineering</i>	<i>2021 – 2025</i> <i>Bhubaneswar, India</i>
Central Academy <i>Senior Secondary (Class XII)</i>	<i>2018 – 2020</i> <i>Jodhpur, India</i>
Central Academy <i>Secondary School (Class X)</i>	<i>2016 – 2018</i> <i>Jodhpur, India</i>

EXPERIENCE

Neophyte AI <i>Software Engineer</i>	<i>Feb 2025 – Present</i> <i>Navi Mumbai, India</i>
– Neo Disha (mobile): Engineered a high-performance, high-resolution camera pipeline using <i>React Native</i> and a custom <i>Kotlin Native Module</i>. Optimized CPU-intensive image processing passes (Native Sharpening, Matrix transformations, and Bitmap manipulation) for 12MP sensor arrays (4032x2268), significantly reducing processing latency. Developed a precision coordinate mapping system (Sensor-to-UI) that accounts for <i>FIT.CENTER</i> hardware letterboxing, featuring a gesture-driven <i>Reanimated</i> UI with sub-pixel accuracy for manual shelf adjustments. – NeoQCR (web & Android): Modernized legacy Android builds (Gradle/NDK/SDK migration) to support latest OS versions while maintaining compatibility with custom AI inference models. Designed a unified dashboard for store-wise media management and KPI visualization from model outputs. – Disha (web): Developed a shelf-analytics dashboard ingesting anomaly data from MongoDB and Azure Blob Storage; implemented real-time KPI tracking via interactive charts and store-level drill-downs. – HRMS platform: Architected a full-scale HR system featuring <i>Geolocation</i> and <i>Facial-recognition</i> based attendance; implemented complex <i>MongoDB Aggregation Pipelines</i> for high-speed payroll and leave balance rollups. – Interactive UI: Integrated <i>Three.js</i> for 3D product showcases and built a reusable React component library to standardize analytics dashboards across multiple in-house initiatives (NEOQA, Sentinel AI). – Also contributing to additional initiatives including NEOQA, NEOCompliance, Neophyte Website, Pocket AI, Sentinel AI, and other in-house projects.	

PROJECTS

FinanceTask <i>React, TypeScript, Supabase, Gemini AI, React Native, Tailwind</i>	Code
– Architected a unified financial and productivity ecosystem that seamlessly synchronizes data between Web and Mobile platforms in real-time, leveraging Supabase's WebSocket subscriptions for instant updates. – Built a comprehensive Reporting module offering Period-to-Period (P2P) financial comparisons, Spending Velocity analysis, and automated monthly PDF summaries to provide granular visibility into user spending habits. – Developed a full-featured task management system with Kanban boards and calendar views, integrated with 'Smart Notes'—an AI-powered feature that automatically extracts actionable tasks and reminders from unstructured text. – Integrated Gemini AI to create a context-aware assistant that delivers proactive financial insights, detects budget anomalies, and enables natural language interaction for one-shot transaction entry. – Engineered a high-performance KPI dashboard using Recharts to visualize real-time pocket money allocation, automatically adjusting daily limits based on remaining monthly budget and specific savings goals.	
Finance Management <i>Next.js, Clerk, Hono, Drizzle, Neon DB</i>	Code
– Implemented secure authentication using Clerk and optimized database queries with Drizzle ORM on Neon (PostgreSQL) for sub-second latency. – Designed interactive financial charts using Recharts to visualize 30-day spending trends and period-over-period comparisons. – Developed a responsive dashboard with CRUD APIs to manage transactions and categorize expenses efficiently.	
E-commerce Website <i>MERN</i>	Code
– Built a robust REST API with Node.js/Express to handle product inventory, user cart management, and order processing. – Implemented Redux for global state management to ensure synchronized cart data across the application. – Integrated MongoDB for flexible data storage and designed a responsive frontend using React and Bootstrap.	
SMILE CART <i>React, JavaScript</i>	Code
– API-driven product grid with polished UI components.	
Netflix Clone <i>HTML, CSS, JavaScript</i>	Code
– Frontend clone demonstrating layout, animation, and responsiveness.	

TECHNICAL SKILLS

Languages/Frameworks	C++, Kotlin, JavaScript (ES6+), React.js, Next.js, Node.js, Express.js, React Native, Reanimated, Three.js
Databases/Infra	MongoDB, PostgreSQL, Drizzle ORM, REST APIs, JSON-RPC, Azure Blob Storage, Azure Functions
Tools/Practices	Git/GitHub, Android NDK/SDK, Postman, Vercel, Performance Optimization, System Design, DSA

ADDITIONAL

Deep Learning; DSA; MERN Development; Logic Families; Web Technology.

Film & Theatrical Society (FATS) and Photogeeks Society, IIIT Bhubaneswar.
